SQL PROJECT

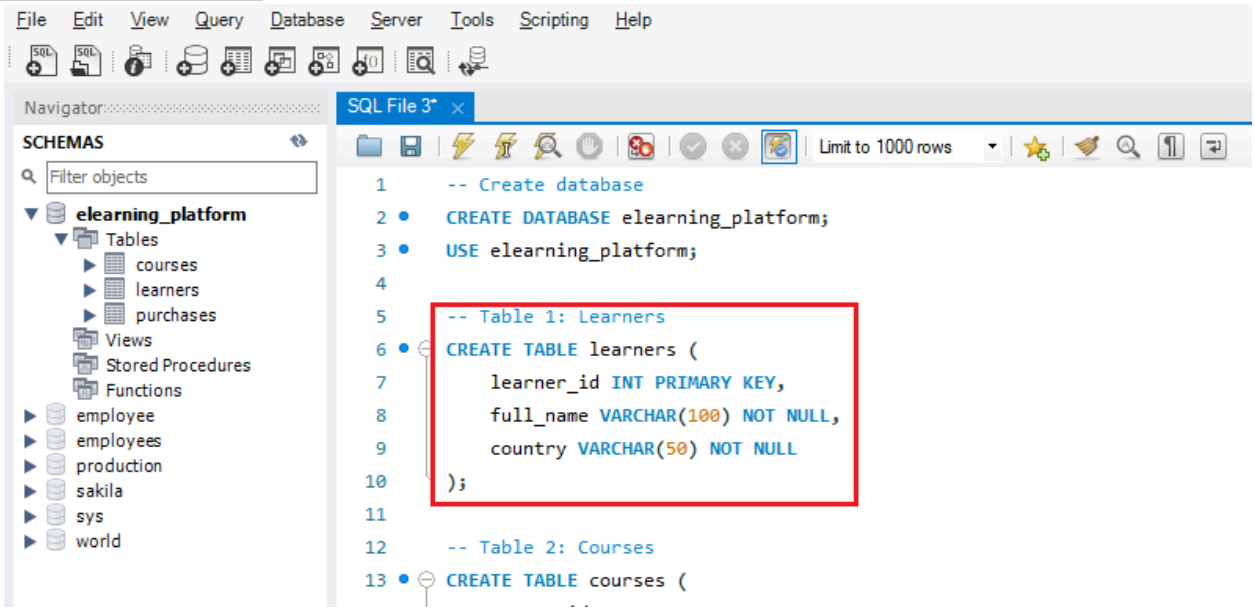

Analyzing E-Learning Platform Purchases using MySQL

Database creation

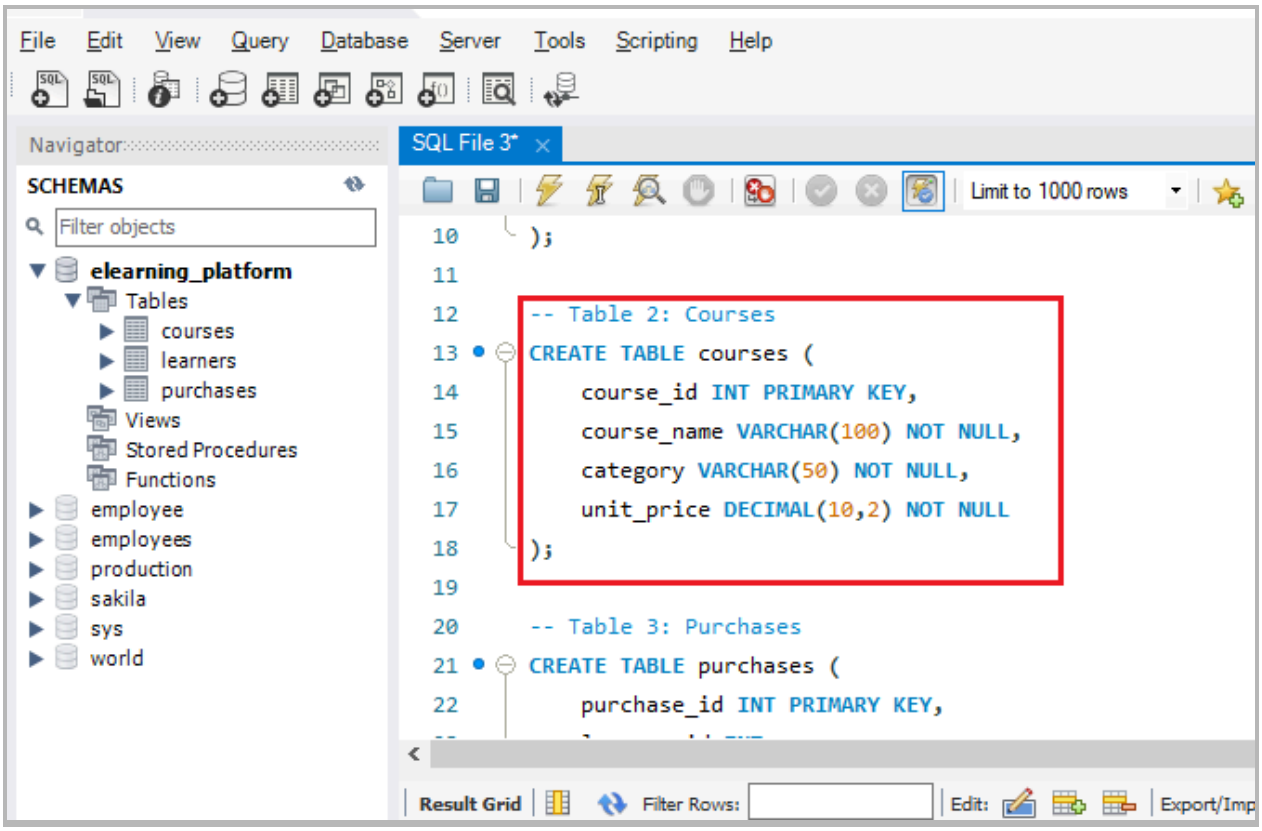

Tables creation

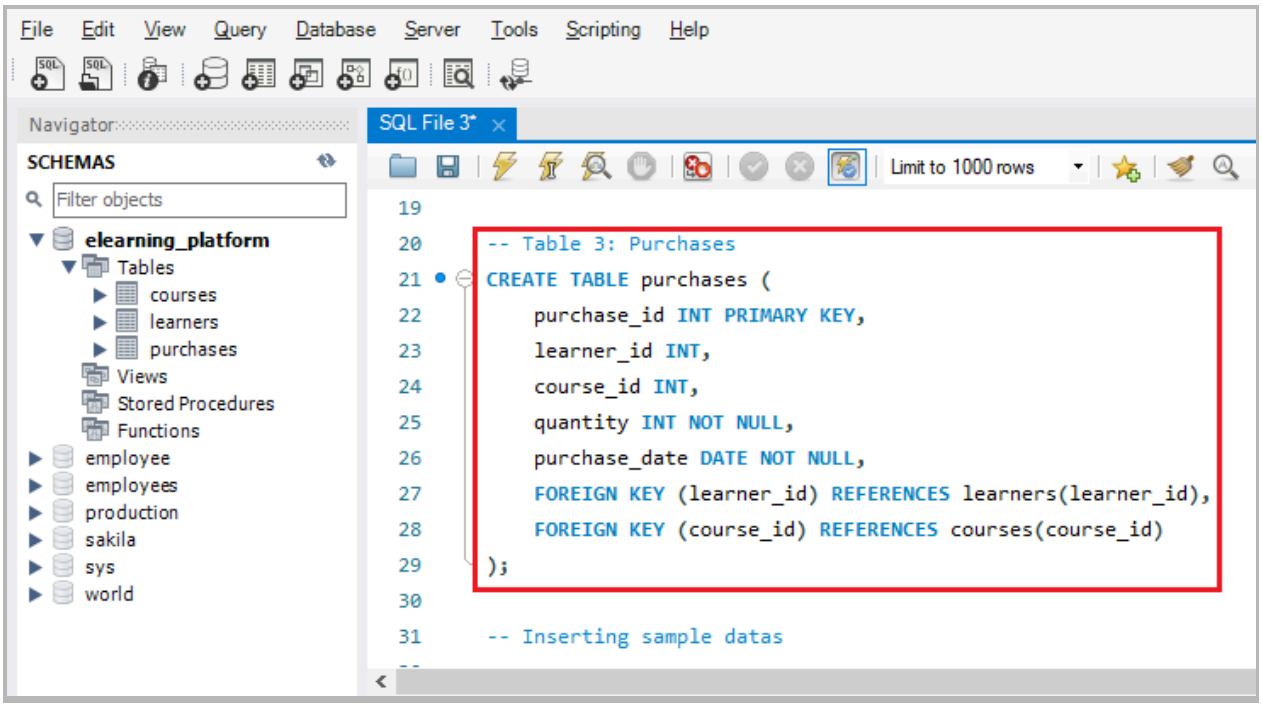

Learners Table

Courses Table

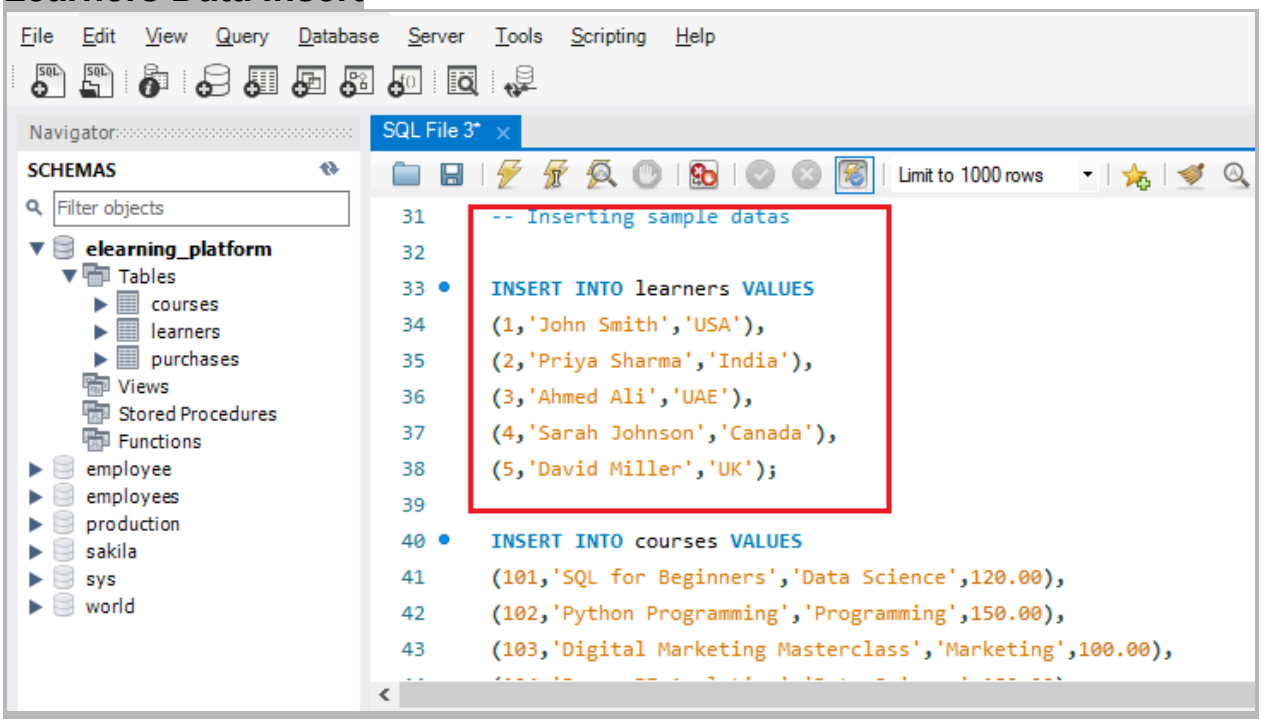

Purchases Table

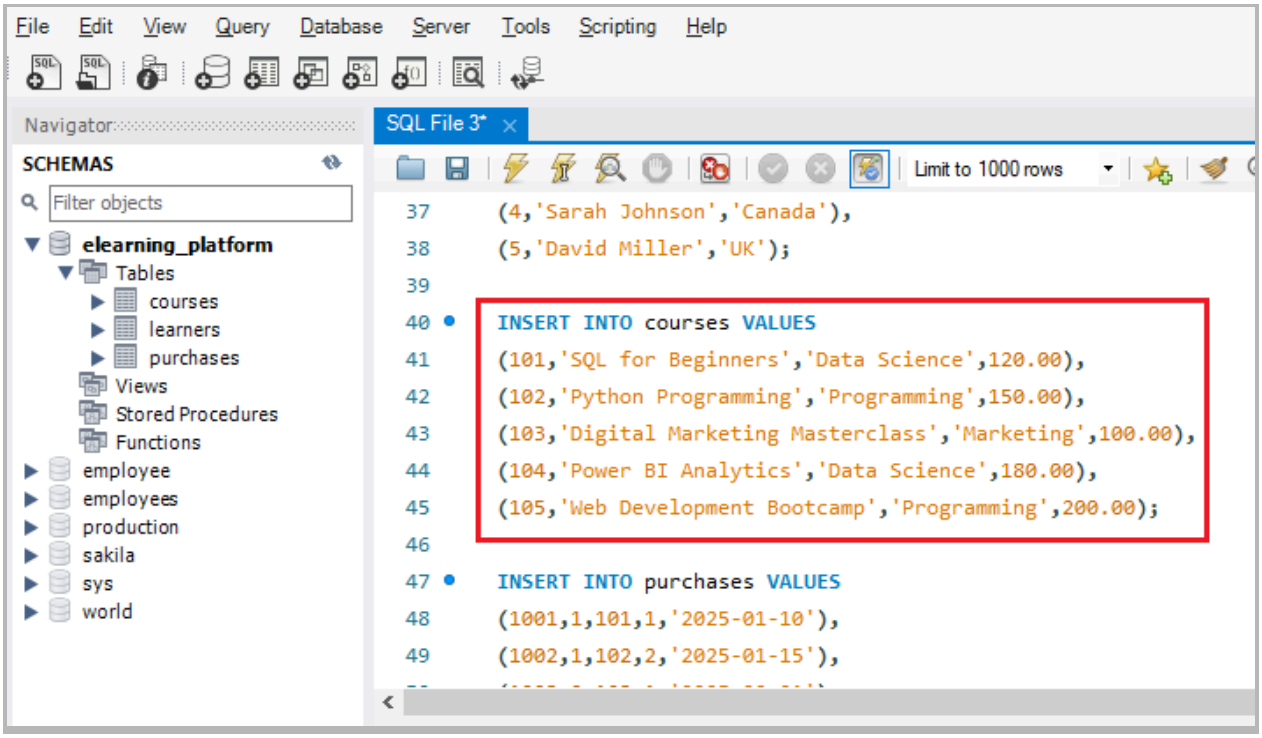

Data Insert

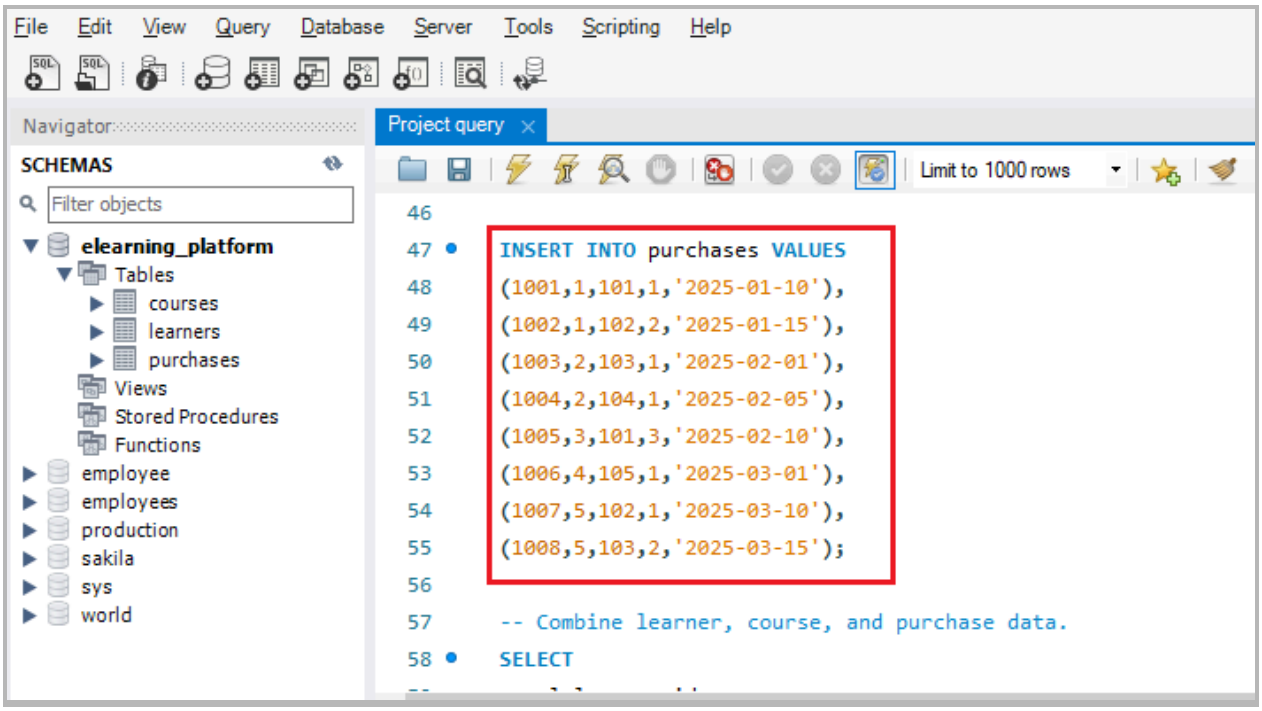

Learners Data Insert

Courses Data Insert

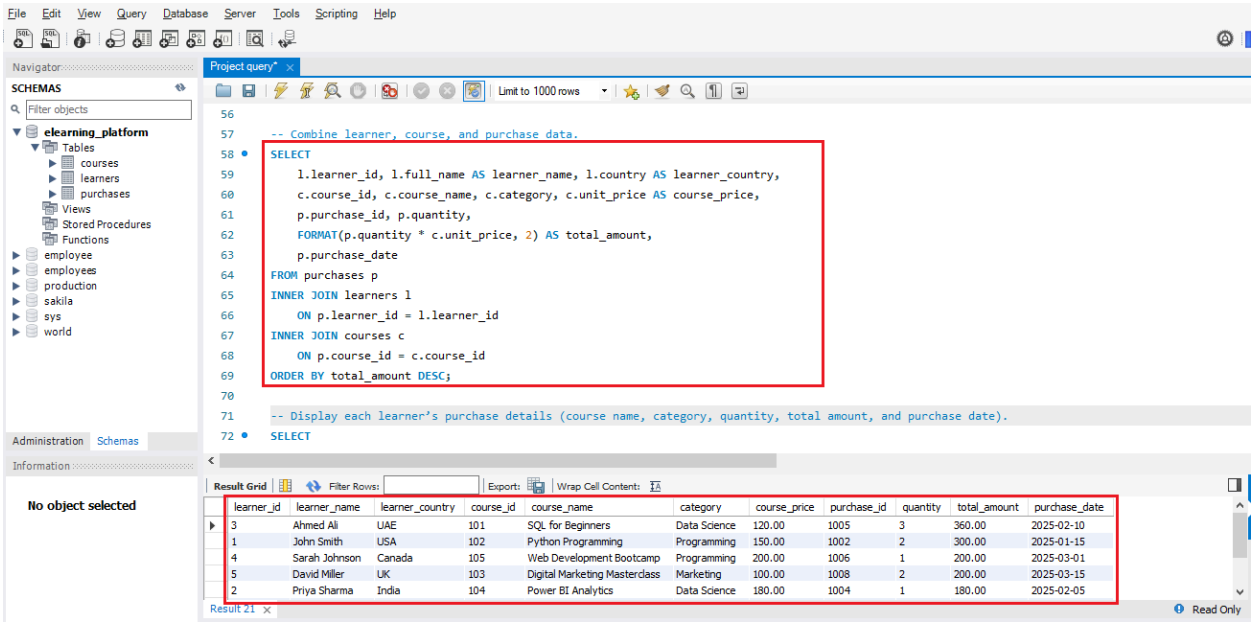

Purchases Data Insert

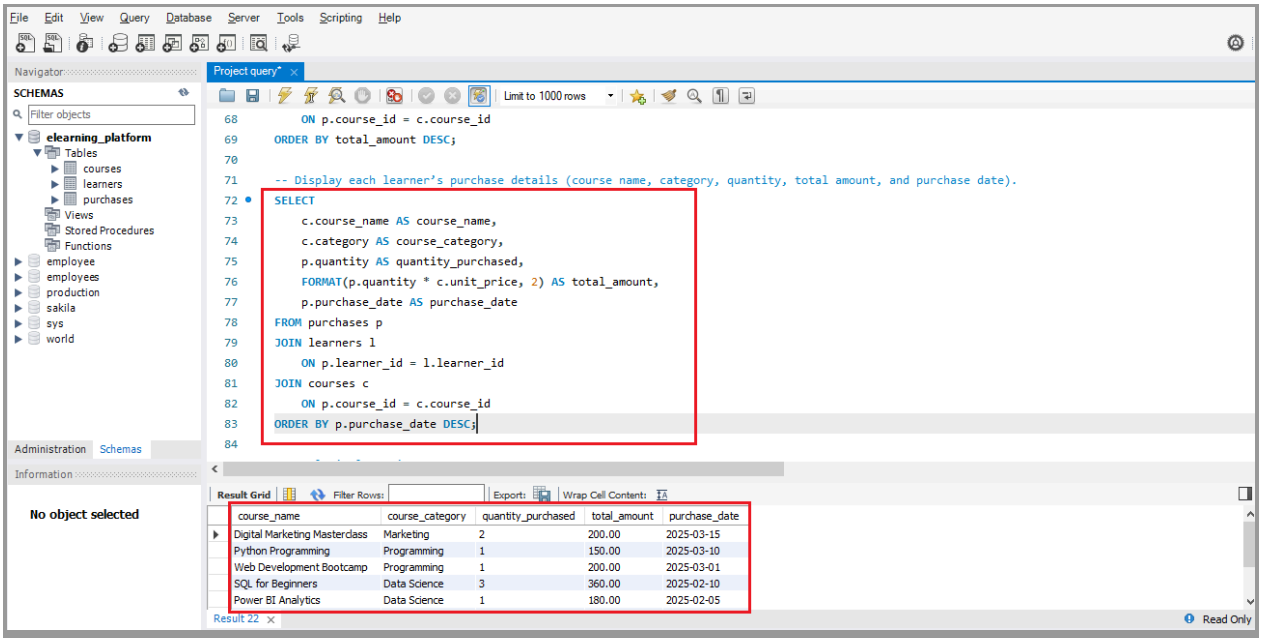

Data Exploration Using Joins

Combine learner, course, and purchase data.

Display each learner's purchase details (course name, category, quantity, total amount, and purchase date).

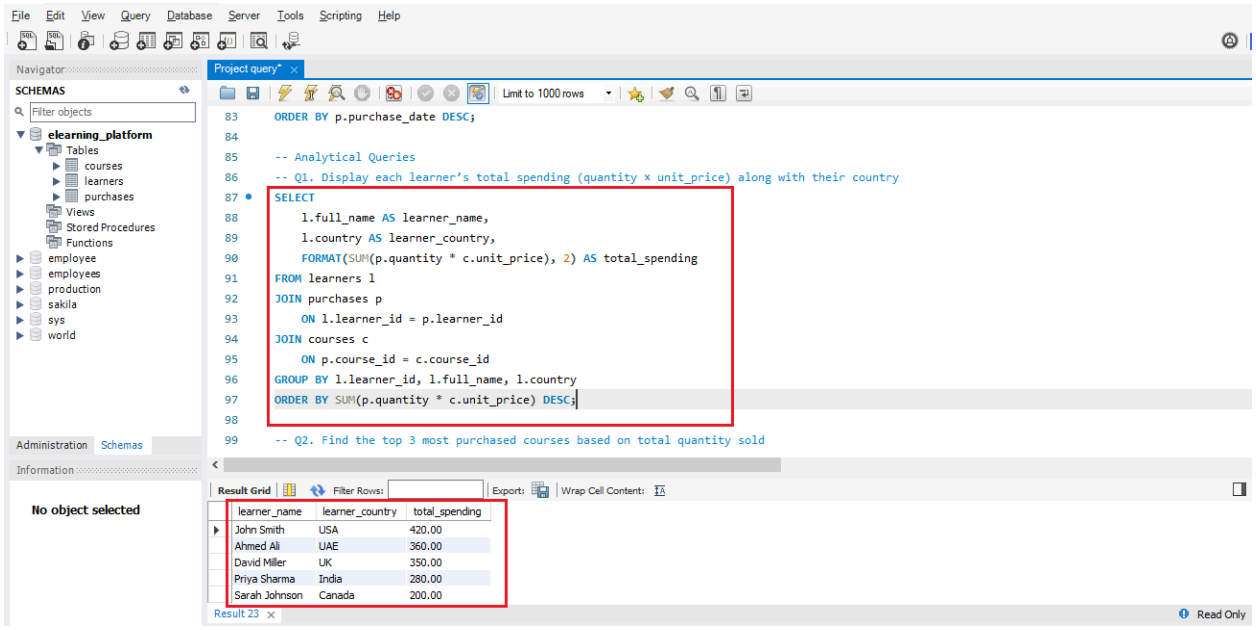

```
68      ON p.course_id = c.course_id
69  ORDER BY total_amount DESC;
70
71  -- Display each learner's purchase details (course name, category, quantity, total amount, and purchase date).
72  SELECT
73      c.course_name AS course_name,
74      c.category AS course_category,
75      p.quantity AS quantity_purchased,
76      FORMAT(p.quantity * c.unit_price, 2) AS total_amount,
77      p.purchase_date AS purchase_date
78  FROM purchases p
79  JOIN learners l
80      ON p.learner_id = l.learner_id
81  JOIN courses c
82      ON p.course_id = c.course_id
83  ORDER BY p.purchase_date DESC;
84
```

course_name	course_category	quantity_purchased	total_amount	purchase_date
Digital Marketing Masterclass	Marketing	2	200.00	2025-03-15
Python Programming	Programming	1	150.00	2025-03-10
Web Development Bootcamp	Programming	1	200.00	2025-03-01
SQL for Beginners	Data Science	3	360.00	2025-02-10
Power BI Analytics	Data Science	1	180.00	2025-02-05

Analytical Queries

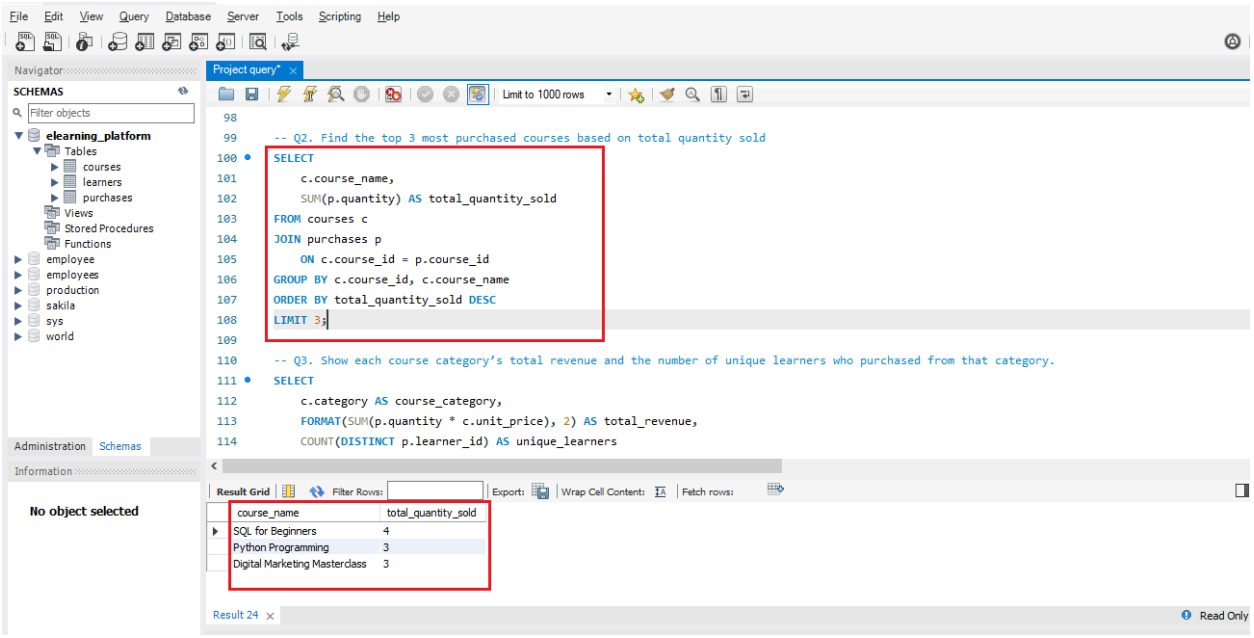

Q1. Display each learner's total spending (quantity × unit_price) along with their country.

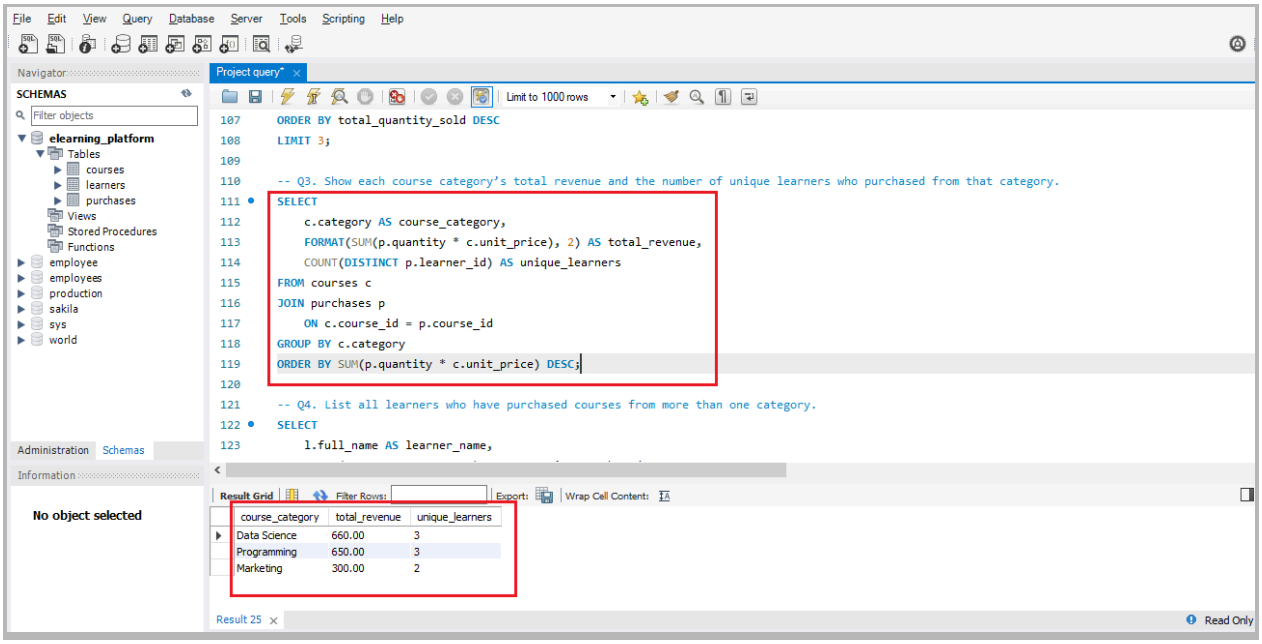

```
83  ORDER BY p.purchase_date DESC;
84
85  -- Analytical Queries
86  -- Q1. Display each learner's total spending (quantity x unit_price) along with their country
87  SELECT
88      l.full_name AS learner_name,
89      l.country AS learner_country,
90      FORMAT(SUM(p.quantity * c.unit_price), 2) AS total_spending
91  FROM learners l
92  JOIN purchases p
93      ON l.learner_id = p.learner_id
94  JOIN courses c
95      ON p.course_id = c.course_id
96  GROUP BY l.learner_id, l.full_name, l.country
97  ORDER BY SUM(p.quantity * c.unit_price) DESC;
98
99  -- Q2. Find the top 3 most purchased courses based on total quantity sold
```

learner_name	learner_country	total_spending
John Smith	USA	420.00
Ahmed Ali	UAE	360.00
David Miller	UK	350.00
Priya Sharma	India	280.00
Sarah Johnson	Canada	200.00

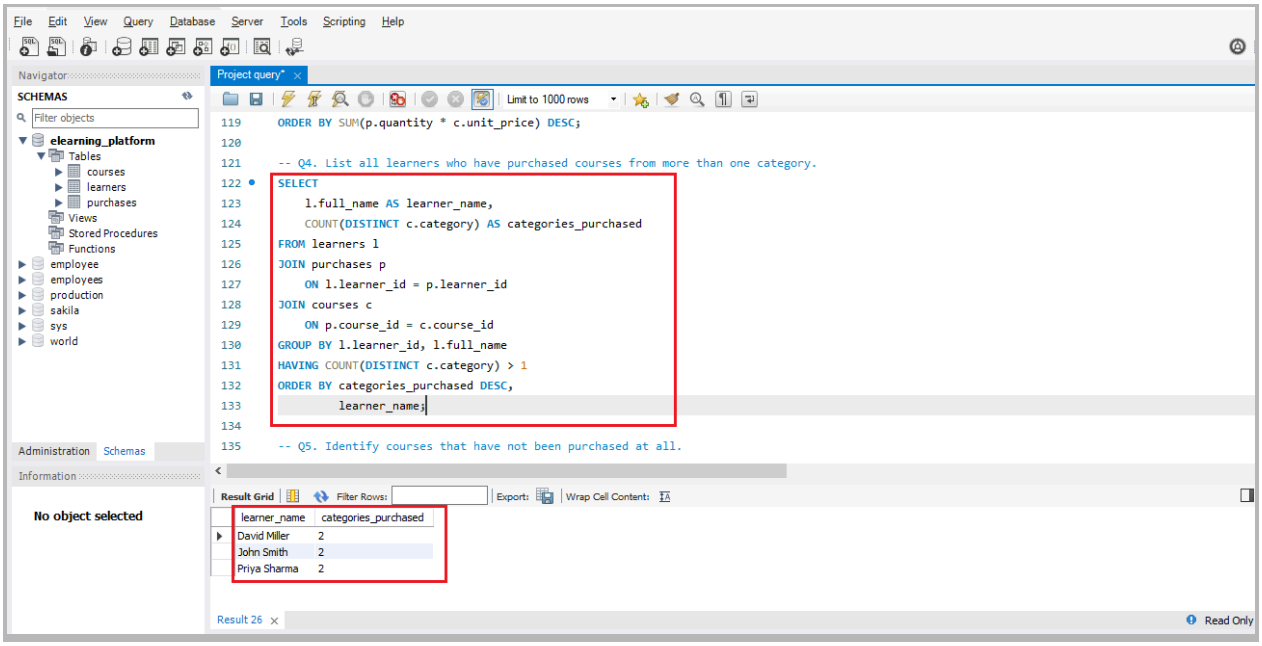

Q2. Find the top 3 most purchased courses based on total quantity sold.

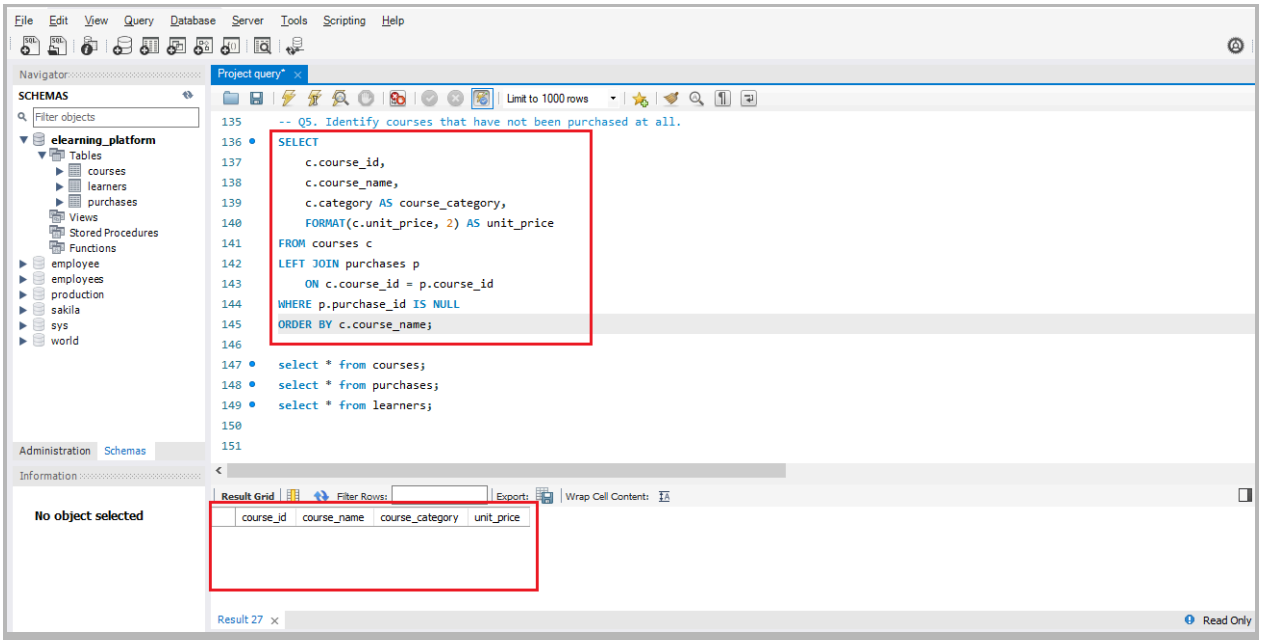

Q3. Show each course category's total revenue and the number of unique learners who purchased from that category.

Q4. List all learners who have purchased courses from more than one category.

Q5. Identify courses that have not been purchased at all.

SUMMARY

This project demonstrates the use of MySQL to analyze e-learning platform data through:

- Database Design
- Joins
- Aggregate Functions
- Grouping and Filtering
- Revenue Analysis
- Business Intelligence Reporting

This project successfully analyzes an e-learning platform's sales data using MySQL. It helps management:

- Track revenue generation
- Identify top customers
- Discover popular courses
- Analyze category performance
- Find learners with diverse interests
- Detect courses with zero sales
